

独立 ip

独立 ip 主要应用场景就是联盟账号注册、登录

1、Vps

独立 ip，一般还是来自于 vps，对于一些要求比较高的联盟，我会购买 vps 或者独立 ip 来作为账号登录时的固定 ip

大部分联盟，是可以用 vps 的 ip 的。有两种方案，一种是买了 vps，然后装 ss，在本地登录。

可以参考 <https://www.52zd.com/2837.html>，也可以百度搜索 shadowsocks 搭建另外一种办法，就是在 vps 上，远程登录。这种就需要 vps 是 windows 了。你其实不需要买 windows 的 vps，因为一般 windows 的比较贵。你可以购买 linux 系统的，然后利用一键 DD 代码，进行安装。

操作步骤就是 xshell 链接上 linux 主机后，然后黏贴以下代码：

```
bash <(wget --no-check-certificate -qO-  
'https://moecub.org/attachment/LinuxShell/InstallNET.sh') -dd  
"https://moecub.org/onedrive/IMAGE/Windows/win10ltsc_x64.tar.gz"
```

2、

Google 上独立 ip 的网站挺多，可以搜索 privacy proxy 或者 socks

举个例子，premsocks.com

打开 <https://premsocks.com>，注册账号并登陆(网站打开速度很慢的时候科学上网即可)。

The screenshot displays the premSocks web application. At the top, a dark navigation bar includes a user profile icon, an 'Online: 1010' status indicator, and a balance of '\$17.30' highlighted with a red box and the Chinese annotation '这里显示余额' (Balance displayed here). The main navigation menu contains 'Home', 'Socks List' (highlighted with a red box), 'Packages', 'API', and 'Help'. Below the navigation bar, there are two main sections: 'Fetching' and 'Searching'. The 'Fetching' section provides instructions on how to obtain proxies and mentions a 'SOCKS5 package' and 'available balance'. The 'Searching' section explains the search system and provides a link to 'FAQ #2'. At the bottom, a 'Socks Proxies' section shows a table of available proxies. The table has columns for IP, Hostname, ISP, Country, City, State, Version, and Speed. Two proxies are listed: one from OVH Hosting in Montreal, Quebec, and another from Rogers Cable in Ottawa, Ontario. A search bar on the right of the table is labeled 'Search:' and contains the text 'canada', with a red box and the Chinese annotation '这里输入国家' (Enter country here). A large blue watermark '小成哥52ZD' is overlaid diagonally across the bottom half of the image.
